

GENERAL VINYL & FAUX LEATHER

CARE & CLEANING

- Ordinary dirt, smudges and water-soluble stains can be removed with mild soap and water.
- Use a clean cloth or soft sponge to gently wipe the stain with soapy water.
- Don't stop there – it's really important to remove any remaining soap solution by wiping the area with a cloth and clean water, and finally to dry the surface with a soft lint-free cloth or towel.
- Avoid cleaners containing abrasives as these can damage the faux leather coating.

DISINFECTING

- A solution of 10 parts water to 1 part bleach may be used as a disinfectant. Wipe the area with a cloth and clean water, and dry thoroughly with a soft lint-free cloth or towel.

DYE TRANSFER

- It's important to remember that certain clothing and accessories dyes – such as those used on denim jeans – may migrate to lighter colors on faux leathers or textiles.
- This phenomenon is increased by humidity and temperature, and usually isn't reversible.
- Take an extra step to protect your upholstery by avoiding direct contact with deep colored dyes.

SUNLIGHT

- Faux leather, like most upholstery fabric, can fade and breakdown if left sitting in direct sunlight for extended periods of time.
- Unless you're using vinyl that's been specifically designed to withstand harsh rays, protect it by keeping it out of direct sunlight.
