## GENERAL CARE AND CLEANING

---

### **FOR LIQUID SPILLS AND STAINS**

- Use a clean dry absorbent cloth.
- Gently blot, do not rub or press the spill stain into the fabric.
- Wipe off with clean water and a clean dry cloth.

### **FOR SPILLS OR STAINS THAT HAVE PENETRATED THE SURFACE**

- Use a clean absorbent cloth with water allowing it to absorb into the stain, gently lift without spreading, or pressing, it into the fabric.
- If the stain is not fully removed, repeat the process adding a mild soap solution of ¼ tsp mild, enzyme detergent, such as Tide or Woolite per 1 cup of warm water.
- Apply the cleaning solution with a spray bottle; work the solution into the affected area with a sponge or soft bristle brush.
- Make sure to work from the outside of the stain inward so as not to spread the stain and rinse your sponge or brush frequently.
- Wipe off with clean water to rinse.
- Repeat the process, if needed, try to lift out the stain with water and/or a soap solution.
- If the stain remains, it may be necessary to use a solvent cleaner recommended for upholstery fabrics.
- Follow the product instructions and test a small inconspicuous area before treating any stains
- Remove soap or cleaning solution residue from the fabric with clean water, and allow to air dry
