

EASY CLEAN

NANOTECHNOLOGY

Fluorocarbon-Free Easy Clean is a stain resistant technology, using a C0 finish, that is free of PFOA, PFOS, PFC and PFAS. This C0 technology offers resistance and repellency to water-based stains and liquids, while never comprising the look and feel of fabrics.

GENERAL CARE AND CLEANING

FOR LIQUID SPILLS AND STAINS

- Use a clean dry soft absorbent cloth to blot up liquids or spills on surface of fabric.
- Gently blot, do not rub, continue to blot up the spill.
- Change out blotting cloth frequently until spot is gone.

FOR SPILLS OR STAINS THAT HAVE PENETRATED THE SURFACE

- Use a clean absorbent soft cloth with water allowing it to absorb into the stain, gently lift and blot without spreading it into the fabric.
- If the stain is not fully removed, repeat the process adding a mild soap solution of ¼ tsp mild, enzyme detergent, such as Tide or Woolite per 1 cup of warm water.
- Apply the cleaning solution with a spray bottle; work the solution into the affected area with a sponge or soft bristle brush. Use as little solution as possible.
- Work area from the outside of the stain inward so as not to spread the stain.
- Rinse your sponge or soft brush frequently. Avoid rubbing or brushing outward which can spread the stain.
- Wipe off with clean water to rinse thoroughly to remove any soap residue, as soap residue will attract dirt. Blot excess moisture with clean soft cloth and allow to air dry.
- Repeat the process, if needed, try to lift out the stain with water and/or a soap solution.
- Do not use bleach.
- Some stains may not be completely removeable and may leave a slight halo, such as permanent marker, lipstick, nail polish, yellow mustard, and shoe polish.
- We also recommend professional dry cleaning.
- The customer is responsible for cleaning as outlined.
